

Exceed Expectations

zsah

zsah Services 09

zsah registered trademark 2009

zsah have a team of passionate software engineers who take a holistic view when approaching projects.

We start by understanding the business and then understanding the tasks to be done.

This method allows us to streamline business processes making them as efficient as possible.

Using agile techniques, we work closely with the business users and ensure that all business requirements are captured and translated to the application being produced.

Definition of Agile Development:

Agile software development (ASD) is a methodology for the creative process that anticipates the need for flexibility and applies a level of pragmatism into the delivery of the finished product. Agile software development focuses on keeping code simple, testing often, and delivering functional bits of the application as soon as they're ready. The goal of ASD is to build upon small client-approved parts as the project progresses, as opposed to delivering one large application at the end of the project, often leading to more expense and lengthy development lifecycles.

Development Services Offered

- Bespoke Software/Web development
 - From complex web portals and large scale web applications to desktop applications and mission critical server applications.
- Software developers
 - Provided on site for urgent requirements or to fill skills gaps.
- Modifying and streamlining existing systems
 - If an existing system needs modifying or needs to be made more efficient, we can analyse key bottlenecks and issues and rectify them.

We have in depth experience in being
Able to work with or lead complex
programs from a business and
technical aspect.

From defining business objectives and
working to a roadmap to architecting
systems and creating business
Continuity plans.

zsah delivers cost-effective managed services for private and public sector organisations. Our services span complete outsourcing to specific managed outsking services across the entire IT infrastructure.

As a UK-based organisation with offshore capacity zsah has the scale, reach and agility to meet any organisation's IT services requirements.

zsah Infrastructure:

Various locations including Telehouse, London. This is the most established and well connected data centre in the UK.

Connections to various tier1 transit suppliers.

Peering with other networks such as Akamai.

Ability to offshore tasks to several different countries if required.

Managed Services Offered

- Applications
 - By managing your applications your internal resources can concentrate on the core business functions and strategy. zsah can provide turn key solutions to applications that your workforce require.

- Datacenters
 - With facilities in multiple datacentres worldwide, disaster recovery and full business continuity is offered as well as the ability to have global POP (Point Of Presence) locations for worldwide services.

- Networks
 - Connecting many sites together can be an easy task, however, we ensure that all applications and data are also easily accessible. Through due diligence we design and construct a network according to current and future requirements as well as budgetary constraints.

By offering proven methods and services that we have successfully implemented for various firms in the UK and abroad; we aim to replicate that success for you.

We hope that this presentation gives you a clear picture of what zsah is capable of.
